

Mini Welding Head SSK10

For Delicate Welding Tasks

Small and delicate spot welding tasks may be performed by means of this type SSK10 mini welding head.

Characteristic Features

Single or double welding head with 1 or 2 electrodes

Compressive force 10 N, 20 N, 50 N, depending on welding task, by means of exchangeable springs

Vernier adjustment of the compressive power from 0 – 100%

Uncomplicated adjustment of the head

Spring-loaded cut-back delay

Rugged and simple design in order to achieve a high lifetime and a high welding rate

All bearings are smooth-running high-accuracy axial ball bearings

Water-cooled electrode holders

Electrode holders with anti-twist protection

Stroke optional, depending on application or customer requirement, for instance with a Festo mini-carriage

Option with column and fixed lower electrode

Weight: 0.9 kg
