

Welding Tongs PSZ 02

Pneumatic Welding Tongs

Precise cut-back of the welding electrodes is a matter of great importance for the quality of the resistance welding joint. The accurate functioning of the welding tongs is thus largely responsible for the quality of the welding joint.

Characteristic Features

Compressive force	10 - 230 N
Maximum stroke	20 mm
Standard electrode diameter	special
Maximum welding energy	512 Ws
Maximum projection	80 mm
Minimum/maximum spot spacing	-
Welding post-carriage	with pressure spring
Power adjustment	continuous
Welding activation	reed switch
Measurement of welding stroke	possible
Water cooling of electrode holder	possible
Weight	3.5 - 4.5 kg
Dimensions H/D/W	see spec sheet
Floating suspension	Option
